Acres (2016 – 2025 as of today)	5,334,644	157%

Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Moderate to high-risk significant fire potential is forecast across the southern Plains and extending into Oklahoma, Arkansas and Mississippi today with highs reaching 100°F, RH 25-30% and locally breezy winds. Moderate to high-risk conditions continue across parts of Wyoming and southeastern Montana due to continued dry and breezy winds. Across the remainder of the west gradual warming and drying will bring some areas into the low-risk category, especially across central and northern California and Nevada.
