

# NATIONAL FUELS & DANGER BRIEFING

This briefing product is temporarily suspended.

The plan is to replace it with a self-populating set of pertinent images (e.g. current Drought Monitor Status, medium & long-term climate outlooks, 7-day precipitation forecast, etc.) and other national-scale, strategic data, with links to their sources. We may further add narrative interpretations and summaries periodically to accompany that automated image gallery. Goal is to get the revised product developed and posted here before fall 2025.
