TO WORK

ENGINE CREWS

DO YOU ENJOY THE OUTDOORS,
AND WORKING AS PART OF A
HIGH-PERFORMANCE TEAM?

The Bureau of Land Management uses engine crews as a primary, first-on-scene, firefighting resource on public lands across the United States. Engine crews are cohesive teams of employees that uphold a tradition of excellence and have solid reputations as multi-skilled professional firefighters.

Engine crews are widely used to fight wildfires across the country. They also assist with prescribed burns, patrol for both human and lightning-caused fires, work with the public to promote fire prevention and other activities that improve the health of public lands.

NOT YOUR ORDINARY JOB

Crewmembers are in extremely good shape and adhere to a strict physical fitness program. They are trained to work with specialized firefighting equipment and have many duties, including construction of fireline with hand tools, hose lays, burnout operations, and mopping up hotspots near the fire's edge.

Engine crews use many tools for their jobs. Their main tools are fire hoses and water. They are skilled in hoselays, portable pump setup, use of fire suppression foam, hosepack construction and deployment, and engine operations. They are also well-trained in using firefighting hand tools, chainsaws, prescribed fire equipment, portable pumps and radios.
