

**Incident Management Situation Report
Friday, January 20, 2023 – 0730 MDT
National Preparedness Level 1**

National Fire Activity (January 13, 2023 – January 19, 2023):

Fire Activity and Teams Assigned	Total
Initial attack activity:	Light (321 fires)
New large incidents:	1
Large fires contained:	1
Uncontained large fires: **	1
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	0
Complex IMTs committed:	0

Nationally, there are zero fires being managed under a strategy other than full suppression.

**Uncontained large fires only include fires being managed under a full suppression strategy.

[Geographic Area daily reports](#)

[Understanding the IMSR](#)

This report will be posted every Friday at 0730 Mountain Time unless significant activity occurs.

IMT1 (CA Team 2) has been mobilized to Northern California to assist with regional response to recent heavy precipitation across the area.

Ten Year Average	Total
Fires (2013 – 2022 as of today)	636
Acres (2013 – 2022 as of today)	9,381

Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Dry weather is forecast over the West Coast for the next week, except for light rain and mountain snow over Washington Saturday. Period of light to moderate snow are likely to occur in the Rockies into early next week, with light snow confined to portions of the northern Rockies mid to late next week. Temperatures will also average below normal across much of the West into the Plains for the next week.

Dry and breezy conditions will develop over portions of west and central Texas into the Rio Grande Valley Saturday into mid-next week. Elevated to critical conditions are most likely to develop Monday and Tuesday of next week. However, some relief for the dry conditions is likely for portions of the southern and central Plains, including the High Plains, this weekend into mid-next week. Snow and mixed precipitation are forecast for much of Kansas today into tomorrow, with light to moderate rain forecast for much of Texas and Oklahoma early next week, but portions of west and central Texas will remain dry. These storms will move east and bring widespread precipitation to much of the eastern US near and east of the Mississippi River as well, but much of the southern and central Florida peninsula will remain dry.
