

**Incident Management Situation Report
Wednesday, June 28, 2023 – 0730 MDT
National Preparedness Level 2**

National Fire Activity:

Fire Activity and Teams Assigned	Total
Initial attack activity:	Light (149 fires)
New large incidents:	2
Large fires contained:	1
Uncontained large fires: **	4
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0
Complex IMTs committed:	1

Nationally, there are six fires being managed under a strategy other than full suppression.

**Uncontained large fires only include fires being managed under a full suppression strategy.

Geographic Area Reports

Understanding the IMSR

Six incident management teams, 20 fire suppression crews, 40 smokejumpers and 15 overhead personnel are assigned to large fire support in Canada.

Active Incident Resource Summary

GACC	Incidents	Cumulative Acres	Crews	Engines	Helicopters	Total Personnel	Change in Personnel
AICC	0	0	0	0	0	0	-80

Southwest Area (PL 3)

Fire Activity and Teams Assigned	Total
New fires:	26
New large incidents:	1
Uncontained large fires:	2

* **West Hemp**, Coronado NF, USFS. Started on DOD land eight miles west of Sierra Vista, AZ. Grass and brush. Active fire behavior with running, wind driven runs and flanking. Area and road closures in effect.

Rico, Las Cruces Field Office, BLM. One mile north of Pinos Altos, NM. Light slash and timber. Minimal fire behavior.

Pass, Gila NF, USFS. Forty miles northwest of Winston, NM. Timber and grass. Moderate fire behavior with backing, flanking and single tree torching. Structures threatened. Trail closures in effect. Last narrative report unless significant activity occurs.

Ten Year Average	Total
Fires (2013 – 2022 as of today)	26,245
Acres (2013 – 2022 as of today)	1,714,018

Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

An upper-level ridge is building over the southern Great Plains and Mississippi Valley, keeping high temperatures at near record levels in those areas. Relative humidity will dip as low as 5-10% in parts of west Texas and eastern New Mexico, amid strong southerly winds. These elevated to critical conditions also continue across the Southwest and the greater Four Corners area where another day of gusty southwest winds and low relative humidity is expected. Isolated dry thunderstorm potential exists over portions of western New Mexico and eastern Arizona. Southern California deserts will also receive strong westerly winds amid lower relative humidity. Isolated to scattered showers and thunderstorms are likely across northern California, the Inland Northwest, the northern and central Great Basin, and Northern Rockies into the central Great Plains. Widespread showers and storms may also develop over the Great Lakes, Mississippi Valley, Northeast and to a lesser extent over the Ohio Valley and Mid-Atlantic. Severe storms are most likely over the Upper Mississippi Valley. In Alaska, afternoon isolated wet thunderstorms will occur again over the Interior, while the southern half of the state will be mostly cloudy with occasional precipitation.
