## **Predictive Services Discussion:**

A deep upper-level trough will continue to move eastward across the Intermountain West, with an associated cold front moving onto the High Plains this evening and overnight. Moist, southerly flow will overspread the southern and Colorado Rockies onto much of the High Plains from southwest Texas through the western Dakotas. Scattered thunderstorms are expected across these areas, with more widespread thunderstorm coverage over eastern New Mexico, including severe thunderstorms. Farther to the east, relative humidity will drop down to 20-35% across much of the Southeast, Texas, and southern into the central Plains, with breezy easterly to southerly winds. Scattered thunderstorms are expected over south Texas and Florida, while the rest of the central and eastern US remains rain-free with above normal temperatures. Below normal temperatures will continue for the West, and scattered precipitation is expected from the Pacific Northwest through the central and eastern Great Basin and much of the Rockies, including snow above 7,500 feet.
